## n.FORM

Mass Notification

While a fire alarm may be perfect for triggering a fire evacuation, it is unable to direct people to safety during things like extreme weather or active shooter events. Signals alone cannot provide clear instructions (to people inside, outside and en-route to your facility) about dangerous or life-threatening situations. However, a mass notification system as an extension of your fire alarm system can.

### Audio Distribution & DRMNS

Sure we have audio distribution & speakers, but if you do already, how are you reaching people out of ear shot? With Mercury's Distributed Recipient Mass Notification System you can reach 100% of your intended audience by text, tweet, social media, digital signage, phones, strobes & desktop notification.

### Meeting Code & Standard is Key

Our entire system, hardware, software & controls has been designed to meet NFPA72 codes & UL2572 standards for mass notification systems.

If you plan to hook up your FACP to any other system, wouldn't you want it to meet established code & standards?

### Easy Controls & FACU Integration

According to the UL2572 standard, your mass notification system must be able to perform a system override of the fire alarm system for a non-fire emergency.

Mercury's system is supervised to ensure performance & is able to meet this criteria.
